Homeschooling Families Nationwide Look to the Stars with the Home Learning Association's 2014 Space Camp Adventure

The Home Learning Association, the newest nationwide homeschool organization in the United States, is now accepting registration for its 2014 Space Camp Adventure, a five-day takeover of the U.S. Space and Rocket Center in Huntsville, Alabama. There, homeschool students and their families will undergo astronaut training, participate in simulated shuttle missions, learn about robotics, build and launch rockets and even explore the Camp's own Area 51.

ENGLEWOOD, CO (October 1st, 2013) – Homeschooling families are known especially for their ingenuity in education, embracing opportunities that are available locally and even abroad to create learning experiences like no other. The Home Learning Association, the United States' newest national homeschooling organization, is enabling educational innovation at a whole new level: space exploration. Families will be able to experience the mysteries and wonders of the final frontier by participating in the organization's 2014 Space Camp Adventure, a five-day takeover of the U.S. Space and Rocket Center in Huntsville, Alabama. There will be two programs for different age groups taking place simultaneously during the camp, from August 31-September 5, 2014. The Home Learning Association is now accepting registrations.

“Space Camp enables you to take your children’s education beyond the four walls of your at-home classroom and into a whole new realm of experiential learning,” said J. Allen Weston, Executive Director of the Home Learning Association. “Space holds a certain grandeur and mystery in the human mind and it’s equally exciting to investigate. The Space Camp Adventure will expose these homeschoolers to a whole new world of hands-on exploration.”

The Space Camp Adventure is open to the whole family. Among multiple other out-of-this-world activities, students and their families will participate in simulated shuttle missions, brave the rigors of astronaut training with use of an authentic 1/6th gravity chair and multiple other simulators (underwater training is an option as well), survey the night sky through the Camp's telescope, build and launch rockets and brave the Camp's interactive Area 51. More details can be found at http://HomeLearningAssociation.com/space_camp.php.

The two homeschool Space Camp programs that are available through the Home Learning Association include special versions of the Space Academy, for parents and children ages 9-13, and Advanced Space Academy, for parents and children ages 14-18. Student participants in the Advanced Space Academy will receive one hour of college credit from the University of Alabama.

There are a limited number of spaces available so families are advised to register early. A \$100 deposit is required per participant at registration with the remainder due by April 1, 2014. The Home Learning Association will provide multiple fundraising opportunities throughout the year that will go toward paying for this extraordinary opportunity.

If families have any questions regarding the Space Camp Adventure, they can reach the Home Learning Association's Adventure Travel team at AdvTravel@HomeLearningAssociation.com or calling 303-800-5774.

About the Home Learning Association

The Home Learning Association is the first national homeschool organization to offer comprehensive, engaging educational, networking and socialization activities and resources at a national level in the United States. It was founded and is run by the Weston family, a veteran homeschooling family of seventeen years. Started by homeschoolers for all homeschoolers, the association partners with over a dozen affiliated companies to ensure all of the homeschooling community's needs are met. To pre-order a free e-book that discusses every aspect of homeschooling in depth or to obtain more information, please visit www.HomeLearningAssociation.com, find us on Facebook, on Twitter (@TerraScholar), or call 303-800-5774.
